Assignment # 1

Powering the Future: GM's Capstone Team Maps the Road to Smarter EV Expansion

Project Vision:

1. The team collaborated with GM to advance the “Three Zeros” vision by identifying 100 optimal locations for DC fast EV chargers.
2. Analyzed EV ownership trends, demographic data, and existing infrastructure to pinpoint underserved areas with high growth potential.
3. Developed a scoring model using machine learning and geospatial analytics to prioritize charger placements for maximum EV adoption and profitability.
4. Created interactive dashboards and heatmaps to present findings, ensuring insights were actionable and accessible for GM decision-makers.
5. Delivered a scalable framework that supports GM's sustainability goals while setting the stage for broader implementation across other regions.
6. Presented well-documented recommendations and technical insights that aligned with GM's long-term EV strategy and business objectives.

Team:

1. The MSBA consulting team is results-driven, combining data-driven problem-solving with innovative approaches to tackle complex challenges effectively.
2. The team demonstrates exceptional organizational capabilities, seamlessly managing timelines, workflows, and stakeholder engagement to deliver impactful outcomes.
3. With deep expertise in AI, data analysis, and visualization, the team excels at providing actionable insights that align with strategic goals.
4. The team's strong communication skills ensure complex technical findings are translated into clear, compelling narratives that empower decision-making.
